

## Harrogate District Business Crime Reduction Initiative

Apex Radio Systems Ltd. was chosen to supply Harrogate Borough Council with a digital radio link system for the towns of Harrogate, Ripon and Knaresborough.

Each of the radio systems needed the ability to communicate directly with the Harrogate CCTV Control Room which monitors CCTV cameras for all three of the towns.

Due to the geographical distance between the towns it was not feasible to simply connect the towns by using standard equipment. With this in mind a Motorola MOTOTRBO system was selected as the best solution to meet our customers requirements.

MOTOTRBO is an extremely versatile digital radio system that enables high numbers of radio users to share voice and data communications on the same system, by linking multiple locations via telephone broadband connection. This then allows you to greatly extend your communications network coverage by connecting multiple sites.

The radio project was given the green light to go ahead in late November, and a release date of the first week of January was given to have Harrogate up and running by.

The Harrogate MOTOTRBO infrastructure was commissioned, installed and tested by Apex engineers and in early 2010 latest technology digital handportable radio equipment was delivered to over 60 different businesses, North Yorkshire Police and Harrogate CCTV Control Room.

Apex provided bespoke training to all radio users and the radio schemes official release date was met without any setbacks.
